Command buttons, command options, commands, and menus appear in the command bar at the top of the screen (see Figure 3.1). Commands are written in the Properties palette or by double-clicking them in the menu bar. Commands are described in detail in this chapter. Figure 3.1 Commands appear in the command bar. Commands are classified according to their namespaces. When you use a command, Autodesk uses the namespace associated with the command in the Properties palette or the context menu. For example, you can set the current object's drop-down list in the menu bar using the Menu Object command, which is from the SYSTEM command set. If you choose File from the context menu, it will be in the FILE command set. Most drawing objects have a selection method. In most cases, it is an option in the Properties palette, but sometimes it is a menu command in the menu bar. You can open the menu bar using the Main Menu on the View toolbar (see Figure 3.2). In the dialog box that appears, you can choose one of the following options: * Object and User interface commands * Status bar * Current layer commands * Current object commands * Current document commands * Commands that start with a specific prefix Figure 3.2 The main menu. You can also choose: * Current user commands * Current database commands Use the pull-down menu to choose the language you want to use. Commands are listed in the menu. There are many commands in AutoCAD Free Download. You will learn how to use some of them as you go through the chapters of this book. Figure 3.3 Commands on the command bar. # 3.2 Object and User Interface Commands The Object and User Interface commands appear in the command bar. Object and User Interface are usually the most useful commands, because they allow you to manipulate other drawing objects. You can also perform tasks such as marking a region and cutting a hole. You can work with other drawing objects, such as layers, block types, and symbols. 5b5f913d15
