The Transistors Database is an Application designed to assist in the design of transistors. it has a simple user interface and powerful internal algorithms. High impedance inverter and logic gates have been added in the database. The overall design of the database has been kept very simple to allow transistors not only to be added quickly but also to add even design in which Transistors can be searched either as PNP, NPN or both. The database also includes a new Algorithm for transistors Comparison as well as other information like CE, CB, Ue, Ueb, Ueb tj. Transistors Database provides a comprehensive, feature-rich, visually rich and easy to use TCAD software with a simple to use interface. It offers in-depth analysis of current collector to emitter resistance, collector to base capacitance, base to collector capacitance, collector to emitter capacitance and current from base to emitter and base to emitter.
