The macro recorder is designed to assist you in mastering the keys on your keyboard. It records and replays play/pause, fast forward and reverse keys. The exact record length is determined by the number of commands specified in the macro. Macros are saved as plain text files and can be imported and exported to/from Excel files. The application will let you know if the file is read only or not. Keymacro also has a Help option that will guide you through the different options. Note that the maximum length of the recorded keys is limited by the length of the command. You can choose whether or not to write in the file. If selected, a file will be written to the specified location or to a new location if the current one is deleted. You can save the saved macros in the Application folder, in the folders you designate or in the file you specify, all of them are possible, if you know how to navigate in your computer.
