What's your experience with it on Windows 7/8? Corellaser's product page states "CorelLASER is platform independent." I can't stand this. Most of the time when I see "platform independent", it means "I'm not worth your time." There's a language barrier here. Do you mean it's OS independent, or do you mean that you can program it for any platform, right? I have CorelDRAW X6, which costs $125 - if it won't install on your OS, it's worthless to me. I have an old (5-6 years) Mac system from the mid-90's, with OS 9. What laser can I run on that? Even if the software would install, I would be stuck with 16-bit color, no Postscript support and I just can't

run the version of Corel that I have. What can you do to make the problem go away, or help me find a laser that will install? This is a major show stopper. Dear Ash, A powerful, time-saving technology has become the fastest growing segment of the graphics industry. With the new generation of laser technology, improved controller technology and light emitting diode (LED) illumination, laser cuts have arrived. As a world leader in laser technology, Corel is also a leader in laser cutter software and accessories. The most powerful laser platforms in the industry work with CorelLaser, the world's only program designed specifically for laser engraving. Why? Any body can pick up a hot knife and cut, but it takes an artist's precision and a laser's accuracy to cut fine details and create rich, durable images. Where
