The correct answers for the questions in this document are listed on the opposite page. . The Kumon Level K2-5 solution book has Kumon Maths Level J12-16 book. .Q: TypeError: object() takes no parameters exception in nested python I'm just getting into python and I'm trying to read a csv file. I'm getting a TypeError: object() takes no parameters error when my code runs. `import csv data_file = open('sample1.txt', 'r') freader = csv.reader(data_file) for lines in freader: if lines.strip().lower() == 'hello': print("Hello, there!")` I know that the error occurs because I'm not reading the file I'm looking for. But as it is nested in a loop, I don't know how to call the file to use its contents in the csv reader line. Any help is much appreciated. Thank you in advance. A: You can just replace `data_file = open('sample1`
