----- Q: How can I calculate if a function is increasing, decreasing or of constant/parabolic growth? For example, when I take $f(x) = \log x$ I'm able to see that it is strictly decreasing, but it doesn't really explain to me if it is of constant/parabolic growth as well. A: It is increasing, because $f(x+1) > f(x)$ and is strictly decreasing, because $f(x+1) > f(x)$ and f is continuous and bounded. It is of constant growth because $\frac{f(x+1)-f(x)}{x+1-x} = \frac{\log(x+1) - \log(x)}{1} = \log\left(\frac{x+1}{x}\right)$ but the last logarithm is positive and $\frac{x+1}{x} > 1$, so $\frac{f(x+1) - f(x)}{x+1 - x}$ is increasing. Q: How do I get the text after the given word in a string using Java? I'm making a script that reads the OSI model and returns the core that should have been parsed, it works fine until it reaches the end of the string. When it gets there it stops parsing the remaining information, not sure why? I want to be able to identify what the core is if it's not the end of the string
