In 2012, the company released the JetDraw app for iPad tablets, which provides

users with a drawing tablet. In 2012, Autodesk acquired CGS-Creo, a division of Cooper Cameron, a developer of rendering and image-based analysis software for use in the gaming industry. The sale included development of the CGS-Creo commercial game engine and related software and technology for three-dimensional rendering, interactive displays, and texturing. History Early history Autodesk Inc. was founded by the Pritzker family in 1982, with "the goal of producing design and drafting software for the construction industry". In 1984 Autodesk Inc. released AutoCAD, which was an inexpensive software package that provided a building information modeling environment, that could be used in engineering applications. In 1990 Autodesk released Civil 3D, which includes more advanced features for the civil engineering market. The company expanded into a full range of software, including Autodesk Architecture, which is designed to use building information modeling techniques for architects. Autodesk Architecture also includes interior design, and Autodesk's Autocad 360 (formerly known as DWG 360) is an Autodesk Revit-like product. Autodesk made an office suite with several products that work together, such as AutoCAD, AutoCAD LT, and Architectural Desktop. In 2000 Autodesk's mechanical software line was acquired by the German enterprise Deutsches Anlagenbau. This company, which has been known as DASA, was founded in 1958 as a supplier of mechanical and electrical systems for power generation. In 2008 Autodesk completed a merger with DASA. In 2002, Autodesk acquired the Radiant Reality company, which created the 3D CAD applications Radiant Forms (former name 3D Design Review), Autodesk Editions, and Autodesk Rendition. The developer's catalog included Grasshopper, a parametric modeling tool, for architectural design. In 2005 Autodesk acquired Express Design Technologies, Inc. (EDT) to increase their product line for architectural and engineering users. In 2007 Autodesk acquired Tautz USA, LLC, a data collection company. Is it possible to have different color palette in a MATLAB GUI? I know we can change the default palette using: `set(handles.axes,'ColorMap', colormap);` But I want to have two different palettes (let's say blue and white palette). Can we have different color palette for the GUI? If yes, how do I change the palette for a specific axer from the command line? A: You can use `set/get` to change the colors of a specific axis and `axes.colorbar` to change the color map for the colorbar. As the manual says, The color specification is a four-element vector that represents the RGB values of the color. so you can use a cell array, for example: `% change colors of a specific axis set(handles.axes, 'Color', {'red', 'green', 'blue', 'white'}); % change color map for the colorbar set(handles.axes, 'Color', {0.2, 0.6, 0.2, 0.6});` If you want to modify it programmatically (i.e. without using a GUI), then it's easier to use the winograd toolbox, which allows you to change the colors of axes and the colorbar directly from the command line.
