1Scanxl Professional 350 License Keyrar.Re: netapp leiabin 11g From: Scott Solomon Date: Thu, 6 Dec 2002 09:26:04 -0800 I have used netapp leiabin, specifically version 11g. That version has a bug. When the system has many containers, in disk space partitioning mode, the leiabin driver cannot open the disk files until they all are assigned. So, in my case, about 50% of the time a Linux machine could not be rebooted as a result. I have tested this in situations when a disk is nearly full and there is more than enough space, so I suppose this could happen anywhere, but it seems common at full. I don't have any idea if this is the intended behavior and/or a bug. Maybe someone else can test this and shed some light. At my company we use a StorageMax disk array, and although they are probably larger than any typical commodity SAN with respect to storage capacity, the array has no problem at full. Anyway, I don't think there is anything wrong with leiabin 10 or earlier. Please let me know if this is the correct way to report a problem. Scott -----
